

GenesisSolutions – Enterprise Asset Management Assessment

Overview

The execution of an Enterprise Asset Management (“EAM”) Assessment will accurately define your organizations Current State on the EAM Maturity Continuum by comparing your existing operation to Best Practice, identifying areas for improvement and opportunities for Return on Investment (“ROI”). In addition to our expertise in EAM, GenesisSolutions has been a Strategic Partner in the implementation, enhancement, and continuous improvement of Computerized Maintenance Management Systems (“CMMS”). This experience has provided us with the ability to understand how to fully leverage your CMMS investment to optimize asset reliability; combining our reliability and CMMS knowhow into a comprehensive analysis. An EAM Assessment will provide the foundation for building the necessary improvement plan required to achieve and exceed your business objectives.

Objective

The intent of an EAM Assessment is to assist our customers in achieving their desired goals towards EAM and Operational Excellence. The following objectives will be executed during the assessment process:

- Conduct a comprehensive assessment of the organization’s Asset Management Program
- Establish and document the prioritized path forward for evolving your current program to Enterprise Asset Management performance
- Deliver a comprehensive EAM Assessment Report defining ROI opportunities and recommended actions to support your organization in the development and execution of an “Asset Management Master Plan” that will lead to maintenance and reliability performance improvement

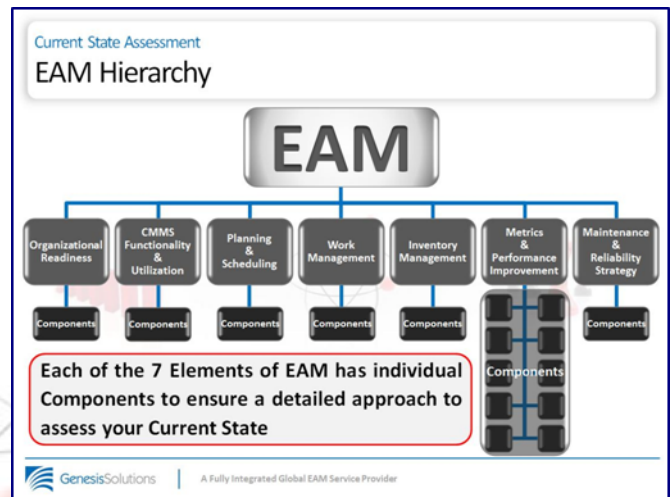

GenesisSolutions – Enterprise Asset Management Assessment

Assessment Criteria

The Asset Management Program will be assessed using the GenesisSolutions EAM Assessment Scorecard that provides measurement criteria across the seven elements of EAM. The criteria used in the scorecard have been established over more than a decade of experience in various industry verticals and is aligned with asset management Best Practice. The seven elements are:

- Organizational Readiness
- CMMS Functionality and Utilization
- Planning and Scheduling
- Work Management
- Inventory Management
- Metrics and Performance Improvement
- Maintenance and Reliability Strategy

Industry Clients

Pharmaceutical & Biotech, Oil & Gas, Power Utility, Municipalities, Water & Wastewater, Manufacturing, Mining, Facilities & Higher Education

Cost & Scheduling

The assessment cost is competitively priced and is calculated based on the size of the operation. The assessment and report delivery can typically be accomplished within a 2-week period.

Scheduling can be arranged with a 30-day advance notification.

Please contact GenesisSolutions at (203) 431-0281 or info@genesissolutions.com for additional information or for scheduling purposes.
